

## Product Data

### Lime green 910 Glass fibre mesh fabric

Used in render and plaster re-enforcement, specifically used in lime plasters and renders, where the mesh size and strength are crucial.

#### Technical information

Roll length: 50m

Width: 1m

Mesh size: 9 \* 10mm

Tensile strength: 2100(average) EN13934-1

#### Application

Apply render in 2 passes the same day to the desired thickness.

The first pass is applied approx 2/3rds of the overall thickness – the Glass Fibre reinforcement mesh is pushed in to the render immediately, while it is still tacky. Overlap joins in the mesh by 10%

Glass fibre may also be used around windows and doors, with a diagonal layer applied. The diagonal piece should be at least 200mm x 400mm.

The second pass is applied over the top within 6 hours to give the total thickness.

#### Storage

Rolls should be stored dry, between -10 to + 50°C

The above details are given for general information purposes and do not constitute a specification.
